Application/Control Number: 10/647,393 Page 2

Art Unit: 1743

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, 12-23, 46, drawn to an apparatus, classified in class 422, subclass 55.
- Claim 11, drawn to a method of testing milk, classified in class 436, subclass 23.
- III. Claims 24-36, 47-48, drawn to a cartridge, classified in class 422, subclass 99.
- IV. Claims 37-43, drawn to a cartridge loader, classified in class 422, subclass 63.
- V. Claims 44-45, drawn to a method of loading cartridge, classified in class436, subclass 46.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to test samples other than milk. Note that group II is suitable for rejoinder with group I upon an indication of allowability of claim 1.
- 3. Inventions IV and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the

Application/Control Number: 10/647,393

Art Unit: 1743

apparatus can be used for making a materially different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the apparatus can be used to make cartridges not having the claimed structure, e.g., a cartridge having a side charge opening and lower discharge opening.

Page 3

- 4. Inventions V and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the cartridge can be made by hand, by manually inserting slides in the cartridge.
- 5. Inventions V and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to load cartridges which are provided in a line on the same level as the columns, the lifter lifting each test piece in turn to be pushed laterally into a side opening of the cartridge and allowed to drop into the cartridge.
- 6. Inventions [I, II] and [III, IV, V] are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one

Art Unit: 1743

subcombination is separately usable. In the instant case, subcombination [I, II] has separate utility such as testing using test pieces not supplied in cartridges and subcombination [III, IV, V] has separate utility such as forming cartridges used with different testing devices. See MPEP § 806.05(d).

- 7. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 8. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1743

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jan M. Ludlow whose telephone number is (571) 272-1260. The examiner can normally be reached on Monday-Thursday, 11:30 am - 8:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
